Pólia One for TikTok Shop

Product requirements document for app review · App ID 7699576083930793735 · Category: Enterprise Resource Planning (ERP) · Market: Brazil, local sellers
Nunoli Soluções Digitais Ltda · Version 1.0 · October 24, 2026 · Owner: Silvia Nunes de Oliveira

1. Product overview

Pólia One (one.usepolia.com.br) is a back-office web app for small Brazilian brands that sell physical products. It keeps products, stock, sales, finances, pricing and goals in one place. Most of our sellers sell on several channels at once (Instagram, WhatsApp, fairs, their own site and marketplaces) and lose track of stock and real profit because each channel lives in a different spreadsheet.

The TikTok Shop integration connects a seller's shop to her Pólia One account so that:

1. every paid TikTok Shop order becomes a sale in Pólia One automatically, with items, price, date and an estimated channel fee;
2. stock stays the same in both places: a sale on any channel lowers the Pólia One stock, and Pólia One sends the new quantity to the TikTok listing;
3. the seller sees what each TikTok sale actually earned after fees and product cost, next to her other channels.

The integration is available on the Pólia One **Pro** plan. It is live in production and has been tested end to end with the Partner Center development shop.

2. Users and use cases

Use case	What the seller does	Result
Connect the shop	Settings > Integrations > TikTok Shop > Connect. Authorizes on the TikTok page and returns to Pólia One.	Shop name and status shown on the card.
Link listings to products	Opens "Ligar anúncios" (link listings). Pólia One lists the shop's products and suggests a match for each SKU, first by seller SKU, then by name. She reviews and saves.	Each TikTok SKU is linked to a Pólia One product variation, or a new product is created from the listing.
Receive orders	Nothing. Orders arrive on their own.	Paid order appears in Sales as "a receber" (receivable) within about one minute; linked items lower stock.
Cancelled orders	Nothing.	The sale is marked cancelled and the stock goes back.
Keep stock in sync	Turns on "A Pólia cuida do estoque" (Pólia One manages stock).	Any stock change in Pólia One (sale on another channel, purchase, loss, count) updates the TikTok listing quantity.
Disconnect	Clicks Disconnect on the card.	Tokens and listing links are deleted at once; past sales stay as her own financial records.

3. Data flow

Authorization Pólia One → TikTok authorization page (with a random `state`) → redirect to one.usepolia.com.br/configuracoes/integracoes/tiktok with `code` → server exchanges the code for tokens → tokens stored encrypted in the Supabase Vault. When the authorization starts on TikTok's side (no `state`), the seller must confirm the shop name in Pólia One before it is linked.

Orders TikTok webhook (order status change) → `tiktok-webhook` function verifies the signature and queues the order ID, answering in under 3 seconds → scheduled job every minute → `tiktok-sync` fetches the order detail and records or cancels the sale. A sweep every 15 minutes searches orders updated since the last sync, so a missed webhook is recovered.

Stock stock movement in Pólia One → database trigger queues the linked SKUs → `tiktok-sync` reads the product's warehouse and sends the absolute available quantity with Update Inventory. Sending the absolute value makes retries safe.

Tokens the access token is renewed with the refresh token before it expires. If TikTok refuses the renewal, the connection is marked as error and the seller is asked to reconnect.

4. TikTok Shop APIs and scopes

API	Version	Used for	Scope package
Get Access Token / Refresh Token	v2	Authorization and renewal	n/a
Get Authorized Shops	202309	Shop ID, cipher, name and region after authorization	Shop Authorized Information
Search Products	202502	List the shop's products and SKUs for linking	Product Basic
Get Product	202309	SKU details and warehouse IDs	Product Basic
Update Inventory	202309	Send Pólia One stock to linked SKUs (only when the seller turns it on)	Product Modify
Get Order Detail	202309	Items, prices, discounts, status and date of an order	Order Information
Search Orders	202309	15-minute recovery sweep by update time	Order Information
Webhook: order status change	type 1	Near real-time order notification	Order Information

Global Shop Information is part of the shop authorization. Finance Information is requested for the next release, which will replace the estimated fee with the real settlement amount; the current version does not call finance APIs. Pólia One does not create or edit listings, prices or orders, and does not message buyers.

5. Business rules

- **When an order becomes a sale:** statuses ON_HOLD, AWAITING_SHIPMENT, PARTIALLY_SHIPPING, AWAITING_COLLECTION, IN_TRANSIT, DELIVERED and COMPLETED create the sale as receivable. UNPAID orders are ignored until paid.
- **Cancelled** (CANCELLED) after the sale exists: the sale is cancelled and linked stock is returned.
- **Idempotency:** one sale per order ID per account, enforced by a unique index. Webhook repeats and sweeps never duplicate a sale.

- **Item price:** original price minus seller discount, grouped by SKU and price.
- **Unlinked item:** the sale is still recorded, without changing stock, and the order note lists the unlinked products.
- **Fee:** estimated from the TikTok Shop fee rule the seller registers in Pólia One (percentage plus fixed amount).
- **Stock to TikTok:** only linked SKUs, only while the seller keeps the option on; negative stock is sent as zero; up to 5 attempts per change, with the error kept for review.

6. Data handling and privacy

Data	Stored	Retention
Shop	Shop ID, cipher, name, region, connection status, last sync time	Until the seller disconnects or deletes her account
Tokens	Access and refresh tokens, encrypted in Supabase Vault; the table keeps only the secret IDs	Deleted with the connection (database trigger)
Listing links	TikTok product ID and SKU ID mapped to a Pólia One variation	Deleted on disconnect
Orders	Sale record: order ID, date, item names, quantities, prices, estimated fee	Seller's own financial record, kept until she deletes it or her account
Webhook queue	Shop ID and order ID only; the webhook payload is not stored	Deleted 7 days after processing
Buyer data	**Not stored.** No buyer name, phone, e-mail, address or tax ID is saved	n/a

7. Security

- Tokens never reach the browser; all TikTok calls run on the server (Cloudflare Workers and Supabase Edge Functions). App key and secret live in environment secrets, never in source code.
- Every API request is signed with HMAC-SHA256 as specified. Webhooks are accepted only with a valid signature (HMAC of app key plus raw body), compared in constant time.
- OAuth `state` is a random UUID stored per account and cleared after use. A shop already linked to another Pólia One account cannot be linked again (unique index).
- Database tables of the integration have row-level security on and no access for browser roles; sales are written by server-only functions that check the account owner of every product variation.
- A lock prevents two sync runs at the same time. Errors are logged without tokens or buyer data.
- The company's Information Security and Data Protection Policy (submitted with the security questionnaire) covers access control, MFA on administrative accounts, incident response and data subject requests under Brazil's LGPD.

8. Screens

- **Settings > Integrations, TikTok Shop card:** what Pólia One imports and what it does not do; Connect button (Pro only). When connected: shop name, last sync, number of linked listings, "Ligar anúncios", the stock option and Disconnect.

- **Authorization return:** confirms the connection, or asks "Connect this shop?" with the shop name when the authorization started on TikTok.
- **Ligar anúncios:** one row per TikTok SKU with the suggested Pólia One variation and the reason (SKU, name, none); options per row: link to a variation, link to a product without stock control, create a new product, or do not link.
- **Sales:** TikTok orders appear with the "TikTok Shop" channel label, like any other channel.

9. How to test

1. Log in at https://one.usepolia.com.br with the test account provided in the review form (Pro plan).
2. Settings > Integrations > TikTok Shop > Conectar. Authorize your test shop.
3. Click "Ligar anúncios", review the suggestions and save.
4. Place a test order in the shop. Within about one minute it appears in Vendas as "a receber" and the linked stock goes down.
5. Turn on "A Pólia cuida do estoque" and change a quantity in Produtos: the TikTok listing updates within about one minute.
6. Cancel the test order: the sale becomes "cancelada" and the stock returns.

10. Out of scope in this version

- Creating or editing listings and prices on TikTok Shop.
- Buyer messaging and customer service.
- Fulfillment, shipping labels and returns handling.
- Reconciliation with real settlement amounts (planned, using Finance Information).
